Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of

response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

Elaborates pre- and postoperative guidelines in the intensive care of pediatric cardiac surgery patients. An indispensable book for the cardiothoracic, pediatric and intensive care residents involved in the acute management of children with heart disease. Addresses the need of a reference manual for general surgery and medicine residents while on rotation in the cardiac care unit. Comprehensive chapters provide simple solutions and explanations to clinical problems rather than offering detailed physiological explanations. Drugs and doses have been given in tables for easy reference at the point of care. A practical book that can be read at leisure and referred to at the bedside.

Ventricular arrhythmias cause most cases of sudden cardiac death, which is the leading cause of death in the US. This issue reviews the causes of arrhythmias and the promising new drugs and devices to treat arrhythmias.

An in-depth review by leading authorities of the latest therapies and techniques for rescuing persons in cardiac arrest. The authors explore the physiology behind current state-of-the-art clinical resuscitation and translate it into practical bedside recommendations, clinical tips, and expert techniques. Topics of interest include the epidemiology of sudden death, management of ventilation, chest compression technique training, public access defibrillation, drug delivery during CPR, the latest drug therapies,

and cardiac arrest in disease, pregnancy, drowning, lightning strike, and trauma. The authors also review the major ongoing research in resuscitation science that will likely affect the next set of international resuscitation guidelines.

Speech-Language Pathology Assistants: A Resource Manual, Second Edition, is a practical, easy-to-use manual that can be used by both SLPAs and SLPA educators. The text defines the roles of SLPAs and their supervisors - offering additional insight into the scope of practice of an SLPA per current American Speech-Language-Hearing Association (ASHA) recommendations—and includes discussions, strategies, and examples of real-world issues, such as using augmentative and alternative communication (AAC) and working with individuals with autism spectrum disorders (ASD). Also included within the chapters are "Things to Consider" sections, which address important factors and modifications that can enhance the effectiveness of treatment activities. For example, incorporating play, literacy, and speech sound remediation into treatment or modifying the clinical interface to enhance group therapy dynamics for children and adults. Initial chapters are devoted to specific aspects of an SLPA's development, such as chapters on ways SLPAs can enhance clinical service through understanding of goals, lesson plans, data collection, and note-writing. Likewise, chapters on professional practice offer insight into ethical problem-solving, presenting a professional image, developing mentoring relationships, working with culturally and linguistically diverse populations, and the use of self-reflection for self-improvement. These chapters are followed by key principles for SLPAs to incorporate in clinical services provided to specific populations and disorders. New to the Second Edition: This second edition contains relevant updates in the field of speech-language pathology and recent research and references throughout. Included are additional "A Day in the Life" stories of actual SLPAs—their daily activities, rewards and challenges they face, and their words of wisdom to

fellow SLPAs. New to this edition are four important chapters applicable to the work of an SLPA. This includes a chapter specific to behavioral principles and the use of positive behavioral supports and intervention (PBIS). New chapters were added in the areas of early intervention and the important topic of language intervention in children—both of which are highly pertinent to the roles of most SLPAs. A chapter was also added to address key principles in service provision for adults with neurologic disorders, including an overview of common treatment approaches for the disorders of aphasia, right hemisphere brain dysfunction (RHBD), cognitive-communicative disorders associated with TBI, apraxia of speech, and dysarthria. *Speech-Language Pathology Assistants: A Resource Manual, Second Edition* is a key resource for enhancing skills and highlighting professional practice issues, for clinical practicum training or future employment. This is a text both SLPAs and SLPA educators will want to have on their bookshelves.
