exponential functions.

~~Chapter 5: Exponential and Logarithmic Functions ...~~

Chapter 5 Exponential and Logarithmic Functions. 5.1 Exponential Functions. A function of the form $y = f(x)ax$ is called an exponential function. The base a is a constant, positive and not equal to 1. The graph of an exponential function is continuous and defined for all x . However, the value.

0521842344c05.xml CUAU030-EVANS August 26, 2008 5:25 CHAPTER5 Exponential and logarithmic functions Objectives To graph exponential and logarithmic functions. To graph transformations of the graphs of exponential and logarithmic functions. To introduce Euler's number. To revise the index and logarithm laws. To solve exponential and logarithmic equations.

~~Exponential and logarithmic functions~~

As with exponential equations, we can use the one-to-one property to solve logarithmic equations. The one-to-one property of logarithmic functions tells us that, for any real numbers $x > 0$, $S > 0$, $T > 0$ and any positive real number b , where $b \neq 1$, If $\log_b S = \log_b T$ then $S = T$. If $\log_2(x+1) = \log_2(8)$, then $x+1 = 8$.

~~5.7: Exponential and Logarithmic Equations - Mathematics ...~~

The natural exponential function is e^x and the natural logarithmic function is $\ln x$. Given an exponential function or logarithmic function in base a , we can make a change of base to convert this function to any base b . We typically convert to base e . The hyperbolic functions involve combinations of the exponential functions e^x and e^{-x} . As a result, the inverse hyperbolic functions involve the natural logarithm.

~~4.5 Exponential and Logarithmic Functions - Calculus Volume 4~~

Write these exponential equations as logarithmic equations: $2^3 = 8$; $5^2 = 25$ $(10^{-3}) = \frac{1}{1000}$) Solution. a. $2^3 = 8$ can be written as a logarithmic equation as $\log_2(8) = 3$ b. $5^2 = 25$ can be written as a logarithmic equation as $\log_5(25) = 2$

~~5.4: Logarithms and Logarithmic Functions - Mathematics ...~~

Exponential and logarithmic functions are used to model population growth, cell growth, and financial growth, as well as depreciation, radioactive decay, and resource consumption, to name only a few applications. In this section, we explore integration involving exponential and

Exponential and Logarithmic Functions Chapter 5 EXPRESSING EXPONENTIAL FUNCTIONS IN THE FORMS $y = abt^{nd}$ and $y = aekt$ Now that we've developed our equation solving skills, we revisit the question of expressing exponential functions equivalently in the forms $y = abt^{nd}$ and $y = aekt$

~~Chapter 5: Exponential and Logarithmic Functions~~

Even for people who already are familiar with logarithms there is probably something new in this chapter. Logarithms. A logarithm is a way of writing one number (x) expressed as a power (index) of a second number (y) which is called the base, and which must be a real number > 1 . Some examples should make clear what this means.
