Vulnerability Assessment of Physical Protection Systems guides the reader through the topic of physical security with a unique, detailed and scientific approach. The book describes the entire vulnerability assessment (VA) process, from the start of planning through final analysis and out brief to senior management. It draws heavily on the principles introduced in the author's best-selling *Design and Evaluation of Physical Protection Systems* and allows readers to apply those principles and conduct a VA that is aligned with system objectives and achievable with existing budget and personnel resources. The text covers the full spectrum of a VA, including negotiating tasks with the customer; project management and planning of the VA; team membership; and step-by-step details for performing the VA, data collection and analysis. It also provides important notes on how to use the VA to suggest design improvements and generate multiple design options. The text ends with a discussion of how to out brief the results to senior management in order to gain

Risk assessment is an integral part of an institution's risk-based audit and controls for all products, services and activities. Time, new products, regulatory changes, competitive environment changes, and market conditions are just some of the factors that can impact risk assessments. In order for financial institutions to satisfy the regulators, they must constantly evaluate risks, weigh risks against rewards, and make decisions based on these evaluations. Risk Assessments for Financial Institutions is a compilation of all the best tools from our most popular risk and audit manuals; here is a reliable resource that you can trust to save you time, make your organization safer, and make your job easier. Updated regularly, there are now risk assessments for such topics as social media, liquidity management, cloud computing, asset management for trusts, and remote deposit capture. The risk assessments specify risks based on specific rating systems in the following areas: • Mobile Banking • Remote Deposit Capture • Information Security • Information Technology • Business Continuity • Electronic Banking • Compliance • Audit • Lending • Finance and Accounting • Enterprise Risk Management • BSA/AML

This book explores contemporary transformations of identities in a digitizing society across a range of domains of modern life. As digital technology and ICTs have come to pervade virtually all aspects of modern societies, the routine registration of personal data has increased exponentially, thus allowing a proliferation of new ways of establishing who we are. Rather than representing straightforward progress, however, these new practices generate important moral and socio-political concerns. While access to and control over personal data is at the heart of many contemporary strategic innovations domains as diverse as migration management, law enforcement, crime and health prevention, "e-governance," internal and external security, to new business models and marketing tools, we also see new forms of exclusion, exploitation, and disadvantage

This report presents results from the first phase of a project concerned with human-machine integration in computer-aided systems, with a specific focus on the PATRIOT Air Defense missile system. The objective of the work is the development of a performance optimization model that will relate human-operator performance to aspects of operator training and selection, human-machine integration, and system deployment. A hierarchy of performance measures characterizing operator performance at the system, mission, and individual task levels was developed and implemented on a PATRIOT environmental, full-task simulator. The second set of project activities involve the development of a simulation model of a PATRIOT Engagement Control Station console operator. This simulation model is to be used as a partial surrogate for experimentation with actual console operators in the construction of an operator performance optimization model. The logical basis for the operator model is described and procedures for parameterizing and validating the model are presented. (Author).

Over 1,600 total pages Application and Use: Commanders, security and antiterrorism personnel, planners, and other members of project planning teams will use this to establish project specific design criteria for DoD facilities, estimate the costs for implementing those criteria, and evaluating both the design criteria and the options for implementing it. The design criteria and costs will be incorporated into project programming documents.
