About the Book: This book Engineering Mathematics-II is designed as a self-contained, comprehensive classroom text for the second semester B.E. Classes of Visveswaraiah Technological University as per the Revised new Syllabus. The topics included are Differential Calculus, Integral Calculus and Vector Integration, Differential Equations and Laplace Transforms. The book is written in a simple way and is accompanied with explanatory figures. All this make the students enjoy the subject while they learn. Inclusion of selected exercises and problems make the book educational in nature. It shou.

The text material has been restructured to provide a more balanced and exhaustive coverage of the subject.The text discusses the core concepts of technical communication and explains them with the help of numerous examples and practice exercises. The book also provides support for soft skills laboratory sessions through a companion CD.With its in-depth coverage and practical orientation, the book is useful not only for students, but also as a reference material for corporate training programmes.

The United States Military Academy at West Point is one of America's oldest and most revered institutions. Founded in 1802, its first and only mission is to prepare young men—and, since 1976, young women—to be leaders of character for service as commissioned officers in the United States Army. West Point's success in accomplishing that mission has secured its reputation as the foremost leadership-development institution in the world. An Academy promotional poster says it this way: "At West Point, much of the history we teach was made by people we taught." Carved from Granite is the story of how West Point goes about producing military leaders of character. An opening chapter on the Academy's nineteenth-century history provides context for the topic of each subsequent chapter. As scholar and Academy graduate Lance Betros shows, West Point's early history is interesting and colorful, but its history since then is far more relevant to the issues—and problems—that face the Academy today. Drawing from oral histories, archival sources, and his own experiences as a cadet and, later, a faculty member, Betros describes and assesses how well West Point has accomplished its mission. And, while West Point is an impressive institution in many ways, Betros does not hesitate to expose problems and challenge long-held assumptions. In a concluding chapter that is both subjective and interpretive, the author offers his prescriptions for improving the institution, focusing particularly on the areas of governance, admissions, and intercollegiate athletics. Photographs, tables, charts, and other graphics aid the clarity of the discussion and lend visual and historical interest. Carved from Granite: West Point since 1902 is the most authoritative history of the modern United States Military Academy written to date. There will be lively debate over some of the observations made in this book, but if they are followed, the author asserts that the Academy will emerge stronger and better able to accomplish its vital mission in the new century and beyond.

The book is designed to help the first year engineering students in building their concepts in the course on Programming for Problem Solving. It introduces the subject in a simple and lucid manner for a better understanding. It adopts a student friendly approach to the subject matter with many solved examples and unsolved questions, illustrations and well-structured C programs.
