## Infrastructure and the environment - UK Construction Online

Abstract. Infrastructure is the foundation on which industrialized economies are built. As global population has grown and as economies of many regions have expanded, the quantity and scale of infrastructure has increased dramatically. Although some infrastructure is used to move people and commodities, much infrastructure is also used to control natural processes or to extract natural resources.

Well-designed infrastructure can have positive impacts on the environment, which also is crucial for development. However, there is a dark side to infrastructural investments: they often lead to environmental degradation. Fossil fuel energy generation and transportation create emissions that contribute to acid rain locally and global warming.
