Extreme Male Genital Modification

Penile subincision is a form of genital modification involves a urethrotomy and vertically slitting the underside of the penis from the meatus towards to the base. It was performed by people of some cultures, such as the Indigenous Australians, the Arrente, the Luritja, the Samburu, the Samoans, and the Native Hawaiians. It may also be performed for personal preference.

Genital modification and mutilation - Wikipedia

Male genital modification is one way that some women assess their mates. Extreme male genital modifications not only honestly advertise status, sexual potency, and ability to provide sexual satisfaction, they may provide a reliable index of male-female cooperation through the male's commitment to endure pain and risk.

16 Extreme Body Modifications You Have to See to Believe

Extreme Male Genital Modification Many types of genital modification are performed at the behest of the individual, for personal, sexual, aesthetic or cultural reasons. Penile subincision, or splitting of the underside of the penis, is widespread in the traditional cultures of Indigenous Australians. This procedure has taken root in Western body modification culture, the modern primitives.

Extreme Male Genital Modification - nsaidalliance.com

Frenum: Probably the second most common male genital piercing along with the guiche. This piercing is performed through the surface skin of the shaft of the penis underneath the glans. It is done across (horizontally) to the shaft. These piercings can be extended down the mid-line of the penis creating a frenum ladder.
