

Hw 3 Selected Solutions

If you ally craving such a referred **hw 3 selected solutions** books that will provide you worth, get the totally best seller from us currently from several preferred authors. If you want to droll books, lots of novels, tale, jokes, and more fictions collections are then launched, from best seller to one of the most current released.

You may not be perplexed to enjoy all books collections **hw 3 selected solutions** that we will very offer. It is not roughly the costs. It's more or less what you need currently. This **hw 3 selected solutions**, as one of the most full of zip sellers here will completely be among the best options to review.

332 HW 3 Selected Solutions Adela Gherga Math 312 : Selected Solutions to Homework 3 Problem 2 (continued) We apply the theorem we learned in class to describe solutions of linear Diophantine equations. a) The equation $3x + 4y = 7$. Since $(3;4) = 1 \nmid 7$ there are nitely many solutions; note that $x = 0 = y = 0 = 1$ is a particular solution. Then all the solutions are of the form Math 312: Selected Solutions to Homework 3 Selected Solutions

If $w = 3$ we get $\log(3)$ and $\log(1)$ as solutions. That is $z = \ln(3) + i(2k+1)\pi$ with $k \in \mathbb{Z}$ or $z = 2\pi i k$ with $k \in \mathbb{Z}$.

Selected Solutions Math 271 HW #6: 1.36 Give an example of three sets A, S 1, and S 2 such that S 1 is a partition of A, S 2 is a partition of S 1, and $\{S_2\} \subset \{S_1\}$. Solution: Let $A = \{1, 2, 3, 4, 5\}$. Let $S_1 = \{\{1, 2\}, \{3, 4\}, \{5\}\}$. Now, S 2 needs to be a partition of S 1 with $\{S_2\} \subset \{S_1\}$. Note the extra set of braces: $\{ \{1, 2\}, \{3, 4\}, \{5\} \}$.

HW # 3 Ahlfors #1 p. 123 Compute $Z^2 = 2z^n(1-z)$ Solution: I was asked about this problem a number of times. I think the problem is that it is in the Cauchy integral formula chapter, and doesn't have the form of something you compute with the Cauchy integral formula. But note that $z^n(1-z)$ is just a polynomial and so it's holomorphic ...

Assignment 3 { Selected Solutions (Theory Part) The following solutions are provided to you to help you study this semester. They are not to be distributed to others outside of the class nor are they intended to be used by students in future semesters as a substitute for completing one's own homework assignments. 1. Pancake sort.

Theory Part)

H/wk 3 (Selected Solutions) 1.65 If a, b are positive integers with $\gcd(a, b) = 1$ and if ab is a square, prove that a and b are squares. Solution. Let $x > 0$ be an integer such that $ab = x^2$. If $x = 1$ then $ab = 1$ and hence $a = b = 1 = 1^2$. Thus we may assume that $x > 1$. Let $x = p_1^{e_1} \dots p_n^{e_n}$ be the prime factorization of x . Thus p_1, \dots, p_n are distinct primes and e

H/wk 3 (Selected Solutions)

Very similar to 3.1, but given a , and D , find distance d . Here $D = 1 \text{ AU}$ and $a = 0.888$ ". Then $d = a \times d / 206,265$ ", or $d = D \times 206,265" / a$. $d = 1 \text{ AU} \times 206,265 / 0.888 = 2.3 \times 10^6 \text{ AU} \times 1 \text{ ly} / 63,000 \text{ AU} = 37 \text{ ly}$. $37 \text{ ly} \times 1 \text{ pc} / 3.26 \text{ ly} = 11 \text{ pc}$. EXTRA FOR EXPERTS: Notices in both of the above that distance in $\text{pc} = 1 / \text{parallax in arc-sec}^{-1}$.

HW 3 - Solutions to Selected Homework Problems by Angelynn Alvarez 1. (Section 1.7, Problem 8) Prove that xRy if and only if $x + 3y$ is a multiple of 4 is an equivalence relation. Proof. To prove R is an equivalence relation, we must show that it is reflexive, symmetric, and transitive. Reflexive: $x + 3x = 4x$, which is a multiple of 4. So xRx , and R is reflexive.

UH - Math 3330 - Dr. Heier - Spring 2014 1.

Homework 3 Selected Solutions 3.5.4 $\cosh x = \sum_{n=0}^{\infty} \frac{x^{2n}}{(2n)!}$ (1) (a) To differentiate this sine series, we must use equation (3.4.13), with $f(x) = \cosh x = \frac{e^x + e^{-x}}{2}$. $f'(x) = \sinh x = \frac{e^x - e^{-x}}{2}$. $f''(x) = \cosh x = f(x)$. $f'''(x) = \sinh x = f'(x)$. $f^{(4)}(x) = \cosh x = f(x)$. This is a cosine series, so to differentiate again, we can simply differentiate term-by-term: $\cosh x = \sum_{n=0}^{\infty} \frac{x^{2n}}{(2n)!}$.

Suggested Solution to Homework 3 Yu Mei P71, 8. If in a normed space X, absolute convergence of any series always implies convergence of that series, show that X is complete. Proof. Let $\{x_n\}$ be a Cauchy sequence in X. To prove that X is complete, it suffices to show there exists a subsequence $\{x_{n_k}\}$ of the Cauchy sequence $\{x_n\}$ which converges. (Refer to P32, Q2. in HW1.)
