Problem Solving Greatest Common
To solve this problem, the first thing
we have to do is break down both
numbers into prime factors. $24 = 2 \times 3 \times 2 \times 2$
 $18 = 2 \times 3 \times 3$. Now, to calculate the
GCF, we need to choose the common
factors with the smallest exponent,
which in this case will be the 2 and
the 3. Once we ' ve chosen our

Distributive Property to express a sum of two whole numbers 1–100 with a common factor as a multiple of a sum of two whole numbers with no common factor.

Sixth grade Lesson Greatest Common Factor & Least Common ...

“ The best way to solve a problem is often the simplest one ” is a variation of the Occam ’ s razor principle that we often apply to all stages of problem solving. Corollaries to this principle include: involve no more people than you need to; focus on the critical issue instead of spending time and energy on side issues; do not develop your reasoning beyond the point necessary to support your conclusions; communicate your reasoning and conclusions clearly, succinctly and using the least ...
