Mechatronic Systems Sensors And Actuators Fundamentals ...

Mechatronic systems are composed of mechanical and electrical components, referred as "smart" systems because of the integration of sensors, actuators, and control systems. Essential part of a mechatronics system is the measurement system that senses the variations in the physical parameters, such as temperature, pressure, displacement, and so on, and converts it to an electrical quantity, viz. electric voltage or current.

Sensors and Digital Signal Conditioning in Mechatronic Systems

Actuators are irreplaceable constituents of mechatronic motion control systems. Moreover, they are true mechatronic systems: that is, concurrent engineering is required to fully exploit their potential as actuators. This chapter analyzes the actuator as a device included in motion control systems. It introduces the intimate relationship between transducers, sensors and actuators, and discusses the implications of sharing these functions on the same

Actuators in motion control systems: mechatronics

Many micro sensors, including biosensors and chemical sensors can be mass-produced. The ability to combine these mechanical structures and electronic circuitry on the same piece of silicon is also important. Actuators are another important component of a mechatronic system. Actuators are usually electrical, mechanical, fluid power or pneumatic-based.

Among the most important elements of mechatronic systems are electromagnetic sensors and electromechanical actuators. Cultivated over years of industrial and research experience, Sensors and Actuators in Mechatronics: Design and Applications builds a practical understanding of the features and functions of various electromagnetic and electromechanical devices necessary to meet specific industrial requirements.

Sensors and Actuators in Mechatronics: Design and ...

Sensors and actuators mostly come under mechanical systems. The actuators produce motion or cause some action. The sensors detect the state of the system parameters, inputs, and outputs.

What are the basic Elements of Mechatronics System

In the mechanical part, the engineer must follow a rigorous procedure to design the mechatronic system. He must build the mechanical part of the system and choose the appropriate sensors and actuators that have to be used in the functioning of the mechatronic system.

For mechatronic systems fault-tolerant sensors, microcomputers and actuators are of interest. Especially attractive are sensors with model-based analytical redundancy and fault-tolerant actuators, where only the parts with lower reliability are redundant, like in hydraulic aircraft spool-valves or the potentiometer of electrical throttles for SI engines, see, e.g., Isermann (2000) .
