The social character of the entire intertwined epistemological and practical natures of the sciences is intrinsic to science and itself split: the internal sociology

within science, the external sociology of the social setting without. Agassi sees these social matters in the small as well as the large: from the details of scientific communication, changing publishing as he thinks to 'on-demand' centralism with less waste (Ch. 12), to the colossal tension of romanticism and rationality in the sweep of

historical cultures. Agassi is a moral and political philosopher of science, defending, disturbing, comprehending, criticizing. For him, science in a society requires confrontation, again and again, with issues of autonomy vs. legitimation as the central problem of democracy. And furthermore, devotion to science, pace Popper, Polanyi,

In 1632, the Amsterdam regents founded an Athenaeum or 'Illustrious School'. This kind of institution provided academic teaching, although it could not grant degrees and had no compulsory four-faculty system.

Athenaeums proliferated in the first century

They have been interpreted as the manifestation of an evolving vision of the role of a higher education; this book, by contrast, argues that education at the Amsterdam Athenaeum was staunchly traditional both in methods and in substance. While religious, philosophical
