Seasonal Distribution. Many species of whales exhibit seasonal changes in distribution associated with large-scale migratory movements. We therefore plotted the observations by season and, for more resolution, by month. These maps reveal considerable within-year variability in distribution patterns of both vessels and whales.

The spatial and seasonal distributions of marine photosynthetic picococaryotes (PPEs) and the underlying structuring mechanisms are not well understood. Here, we performed fluorescent in situ hybridization associated with tyramide signal amplification along an estuary to basin transect in the northern South China Sea (SCS) across three seasons (spring, summer and autumn).

The atmospheric concentrations of 14 organophosphate esters (OPEs) were monitored by passive air sampling at 33 sites to determine their spatial distributions, and seasonal variations (summer and winter) in Tianjin, North China. The total concentrations of the OPEs (9 OPEs) in the summer ranged from 0.08 to 1113 ng/sample with a median of 98.4 ng/sample, which was non-statistically different from the concentrations obtained in the winter (which ranged from 1.93 to 548 ng/sample with a ...

Changes in climate during the 20th century differ from region to region across the United States. We provide strong evidence that spatial variations in US temperature trends are linked to the hydrologic cycle, and we also present unique information on the seasonal and latitudinal structure of the linkage.

From an integrated interpretation, distance to nearest industry impacts the spatial distribution of NO<sub>2</sub> in cold season, while it impacts that of PM<sub>2.5</sub> and AQI in both warm and cold seasons. The research finds that these two models supplement each other well and together help to give us a better understanding of how air quality is affected in the urban landscape.

One may argue that using spatial distribution occurrence will be biased because a species may incorrectly appear to be absent from a particular location if that area has never been surveyed. Ferrier (2002) mentioned that the problem of false absences is less severe when spatial units of analysis are sufficiently large, for example, coarse grid cells or whole ecological regions.
