Laser Cutting Guide for Manufacturing presents practical information and troubleshooting and design tools from a quality manufacturing perspective. Equally applicable to small shops as it is to large fabricator companies, this guide is a roadmap for developing, implementing, operating, and maintaining a laser-cutting manufacturing enterprise. The book focuses on metal cutting of sheets, plates, tubes, and 3-D shaped stampings. It presents today's reality of the engineering and business challenges, and opportunities presented by the rapid penetration cutting in all facets of industry.

Laser Additive Manufacturing: Materials, Design, Technologies, and Applications provides the latest information on this highly efficient method of layer-based manufacturing using metals, plastics, or composite materials. The technology is particularly suitable for the production of complex components with high precision for a range of industries, including aerospace, automotive, and medical engineering. This book provides a comprehensive review of the technology and its range of applications. Part One looks at materials suitable for laser AM processes, with Part Two discussing design strategies for AM. Parts Three and Four review the most widely-used AM technique, powder bed fusion (PBF) and discuss other AM techniques, such as directed energy deposition, sheet lamination, jetting techniques, extrusion techniques, and vat photopolymerization. The final section explores the range of applications of laser AM. Provides a comprehensive one-volume overview of advances in laser additive manufacturing Presents detailed coverage of the latest techniques used for laser additive manufacturing Reviews both established and emerging areas of application

Vols. for 1970-71 includes manufacturers' catalogs.
